

FinTrust database architecture decisions

Week 4, Days 1 to 3 | Cape Town primary Region: af-south-1

DESIGN CHECKPOINT

1 Core transaction data

RDS PostgreSQL availability, reporting and recovery

2 Regional data services

Aurora reporting and active-active session storage

3 Purpose-built choices

One data model is not the right fit for every requirement

Decision boundaries

Multi-AZ is availability, Read Replicas are read scaling, Global Tables are multi-Region active-active, and each purpose-built service matches a specific data model.

Architecture design prepared from the Week 4 Days 1 to 3 FinTrust scenarios and design checkpoints.
