

Container Platform Architecture

Week 2 | Containers

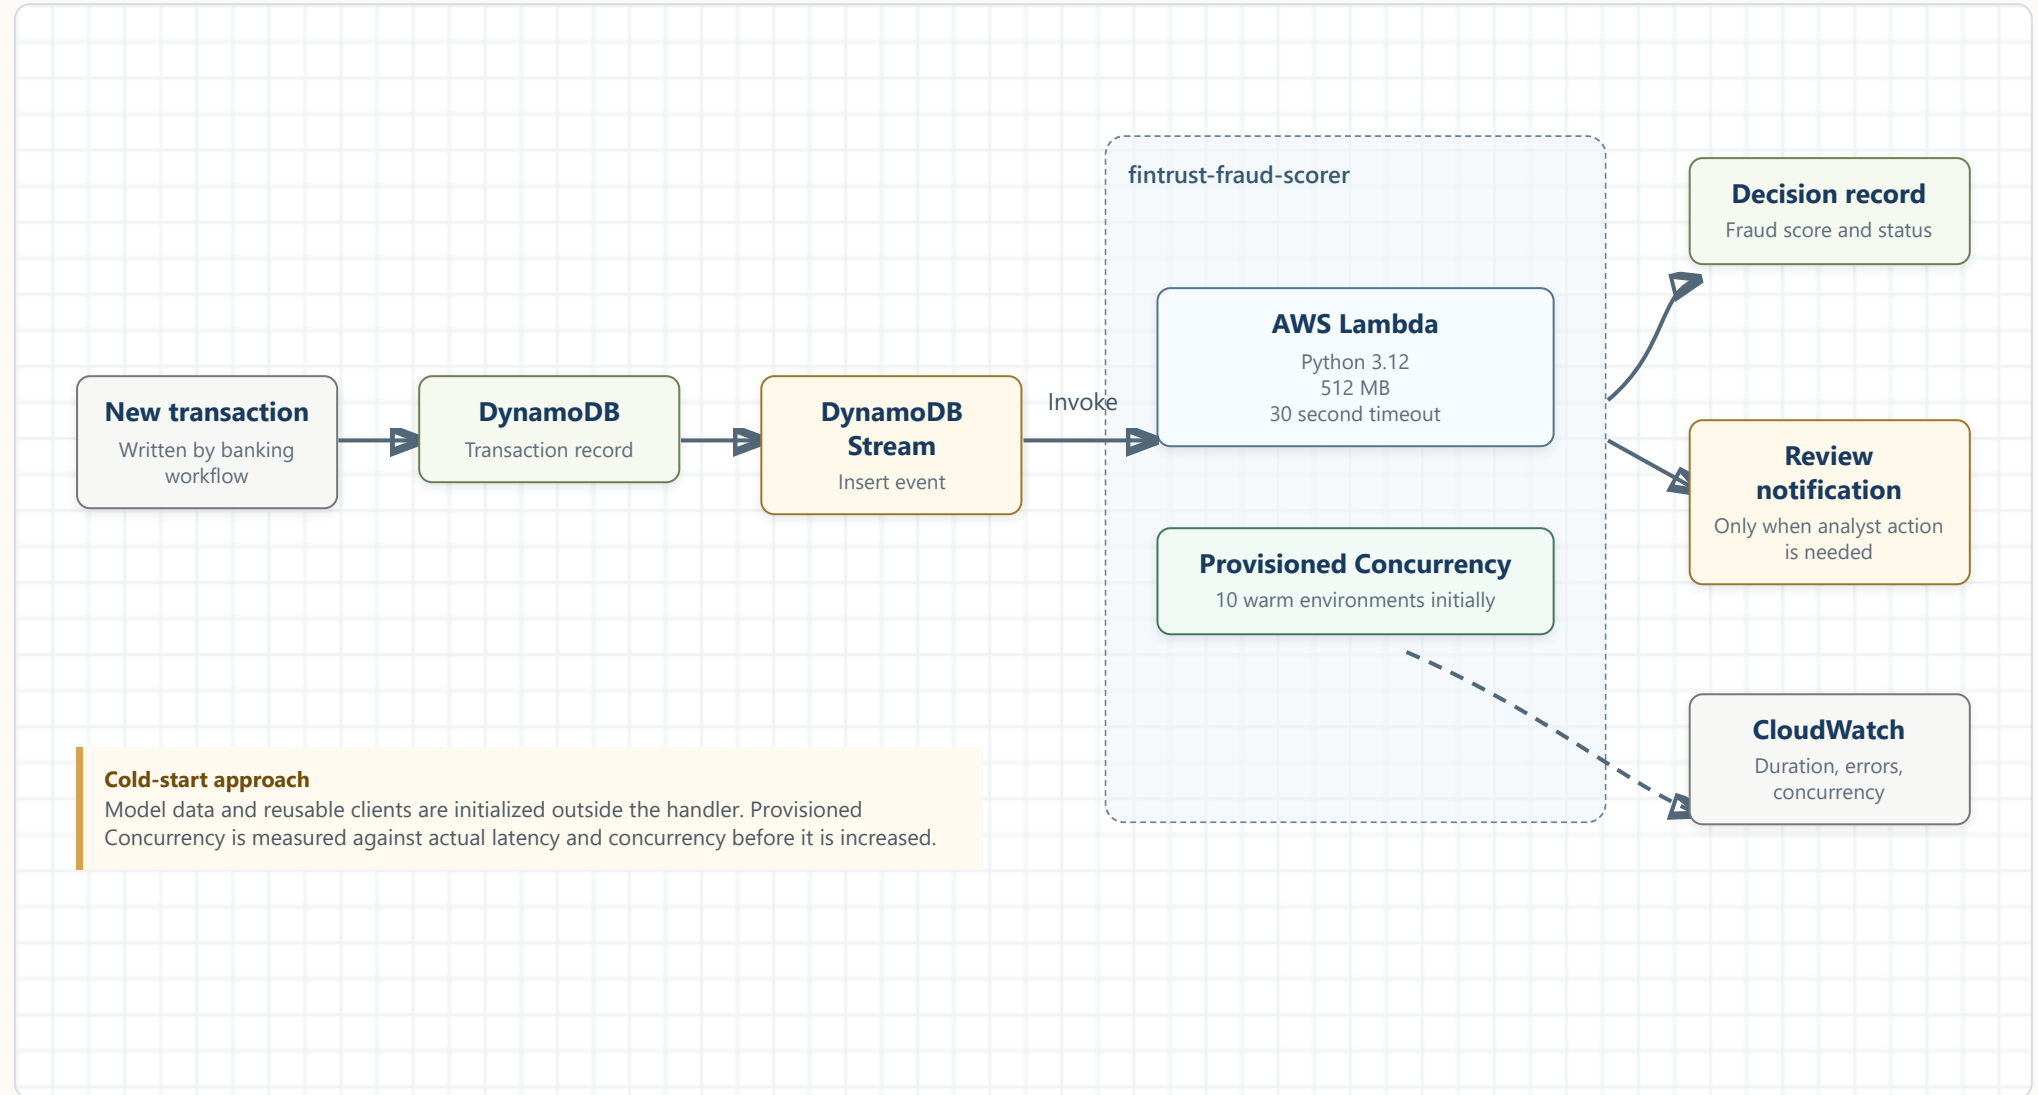

ECR, ECS on Fargate, load balancing, scaling, and operational visibility

Fraud Scoring Lambda

Week 2 | Serverless

Event-driven processing with explicit runtime and cold-start decisions

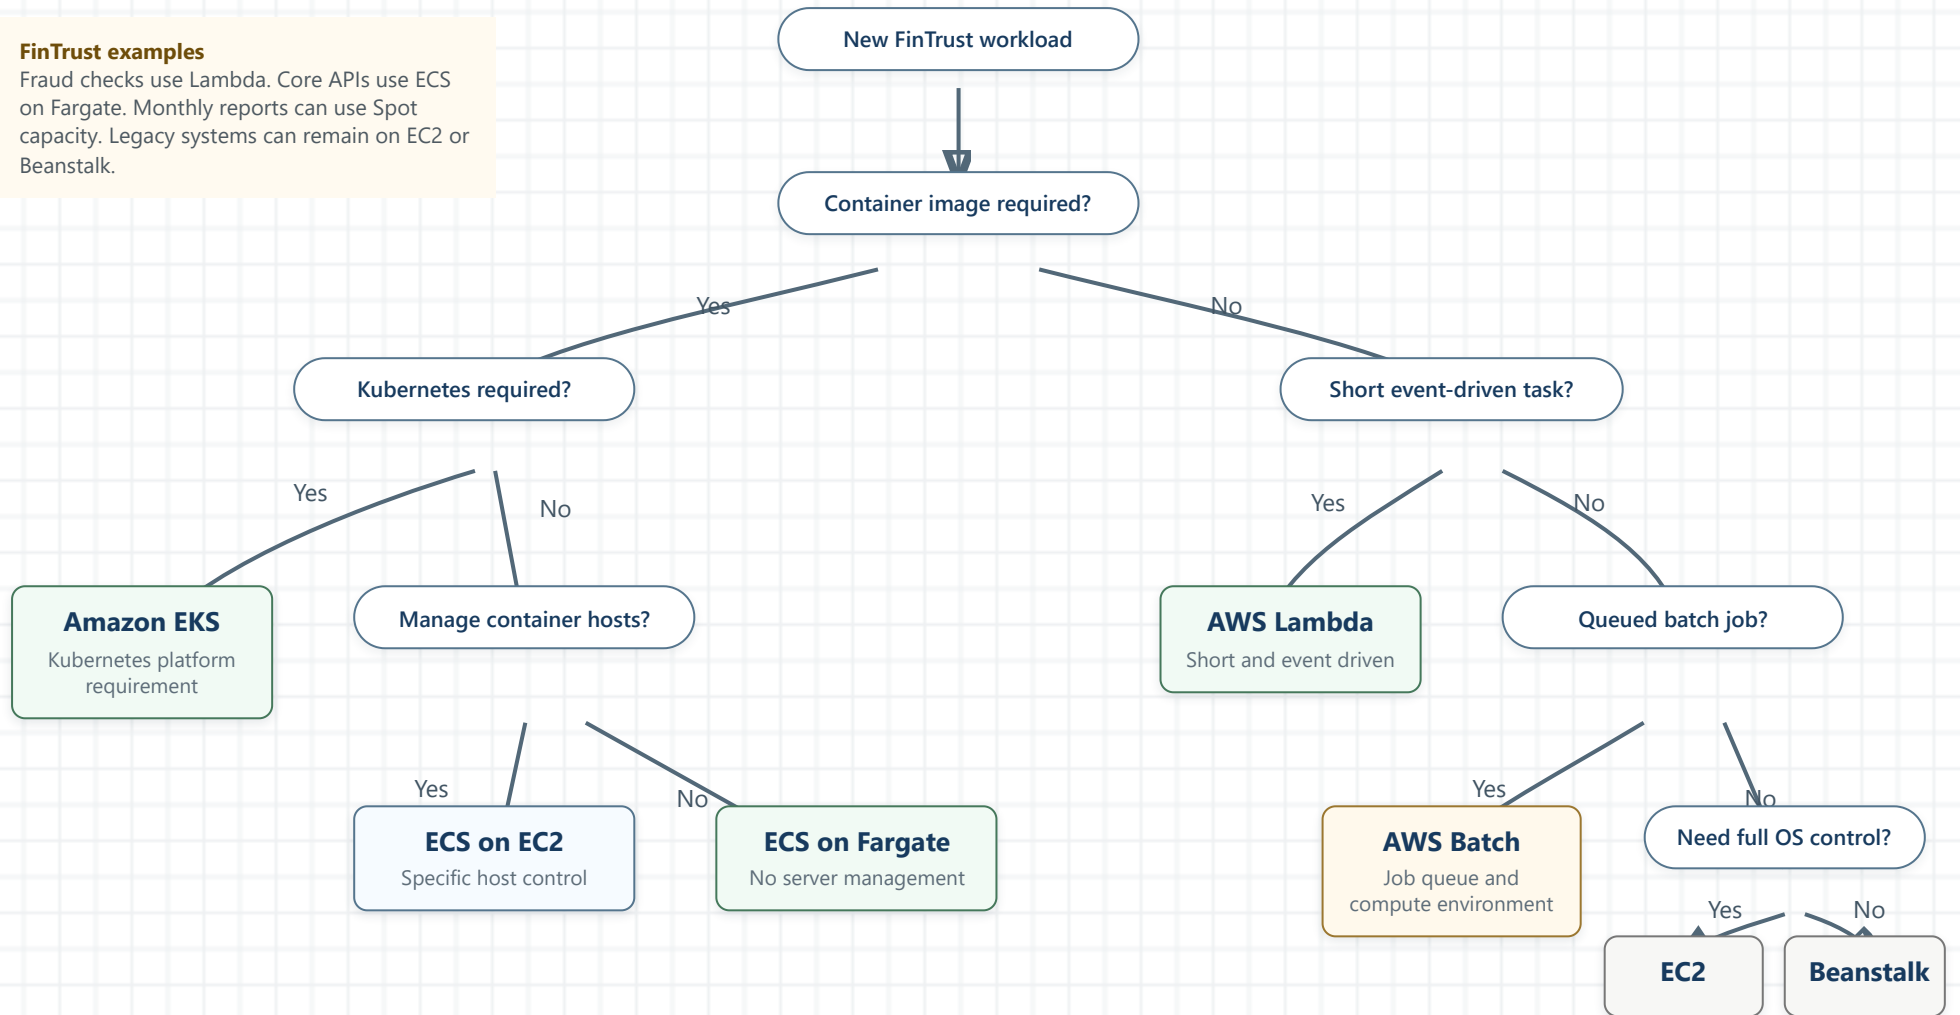

Compute Service Decision Guide

Week 2 | Service selection

A repeatable path for choosing EC2, Lambda, ECS, EKS, Batch, or Beanstalk

FinTrust examples

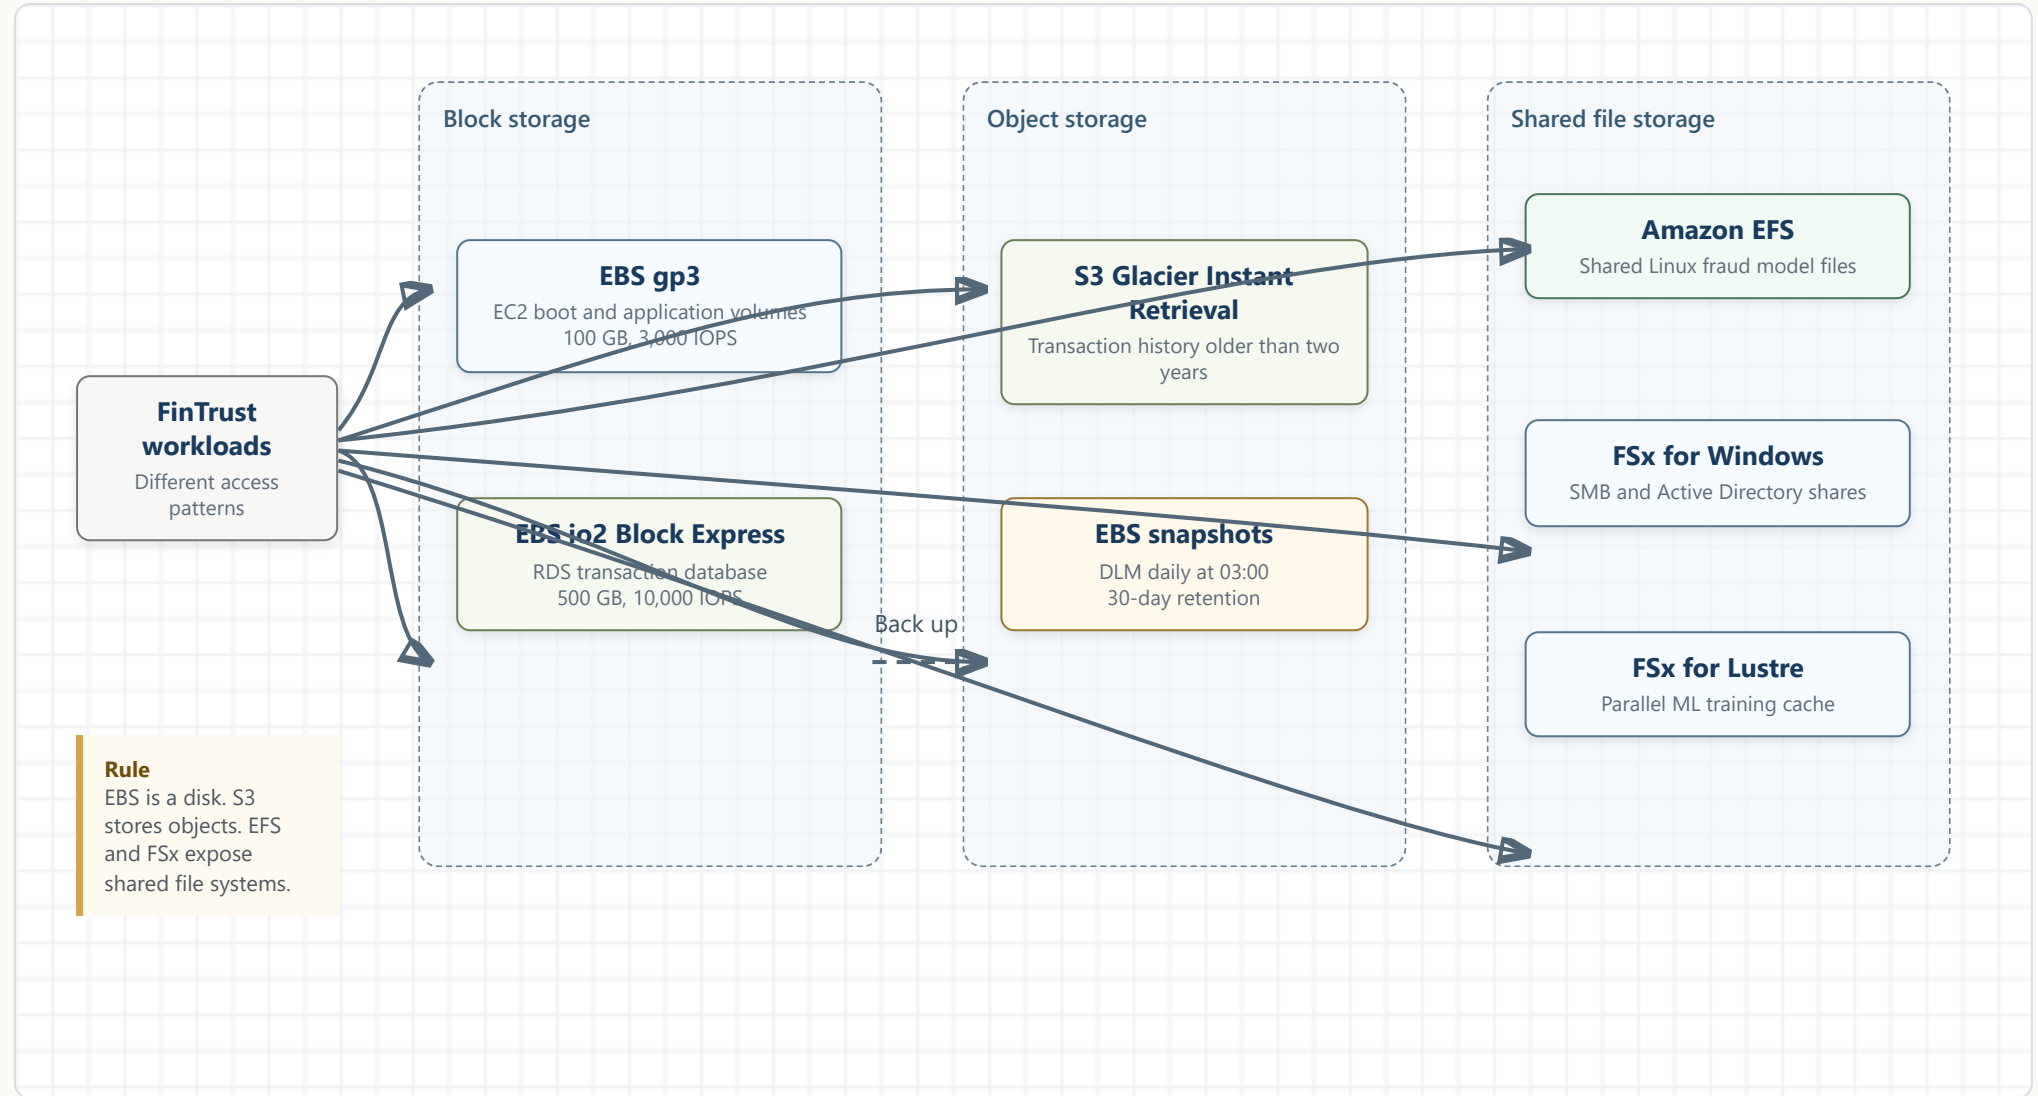

Fraud checks use Lambda. Core APIs use ECS on Fargate. Monthly reports can use Spot capacity. Legacy systems can remain on EC2 or Beanstalk.

Storage Architecture

Week 2 | EBS, S3, EFS, FSx

Block, object, and shared file storage mapped to the correct workload

Transaction Decision Engine

Week 2 | Python conditionals

The exact order used by `assess_transaction()`
