

FinTrust governed analytics path

Daily compliance reporting from source records to a managed dashboard

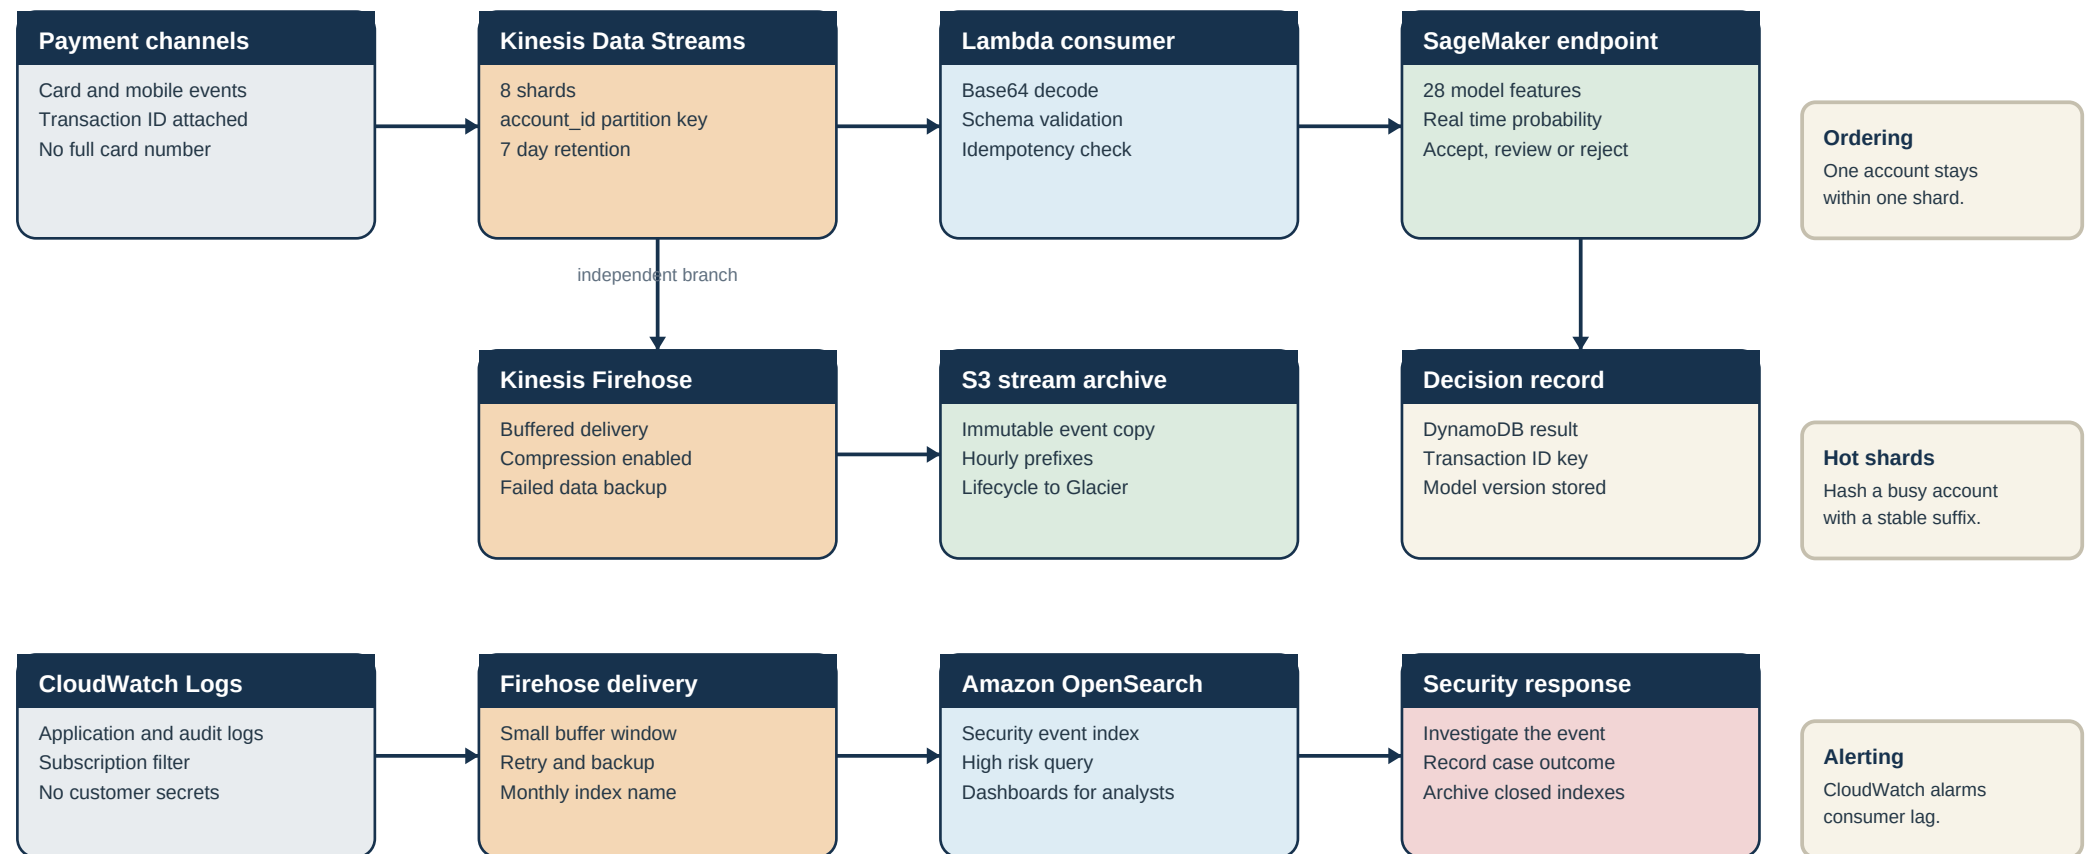

Week 8 | 1 of 5

Transaction stream and security search

Two delivery paths separate immediate decisions from searchable audit records

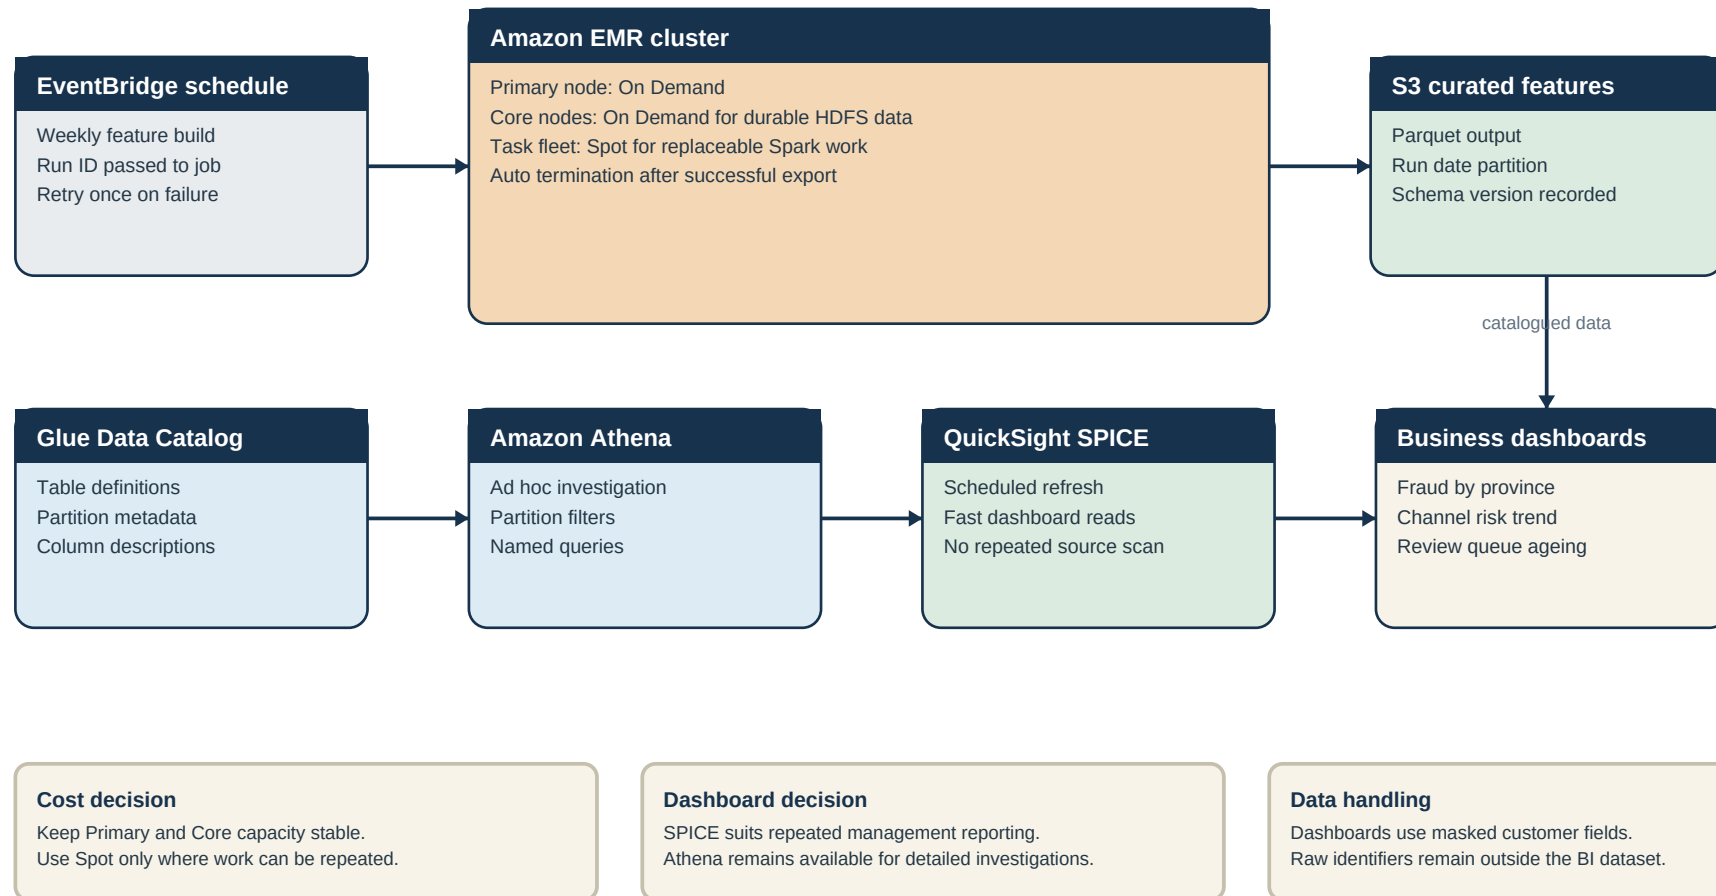

Week 8 | 2 of 5

Large scale processing and business reporting

Transient EMR capacity prepares curated fraud features for controlled self service analysis

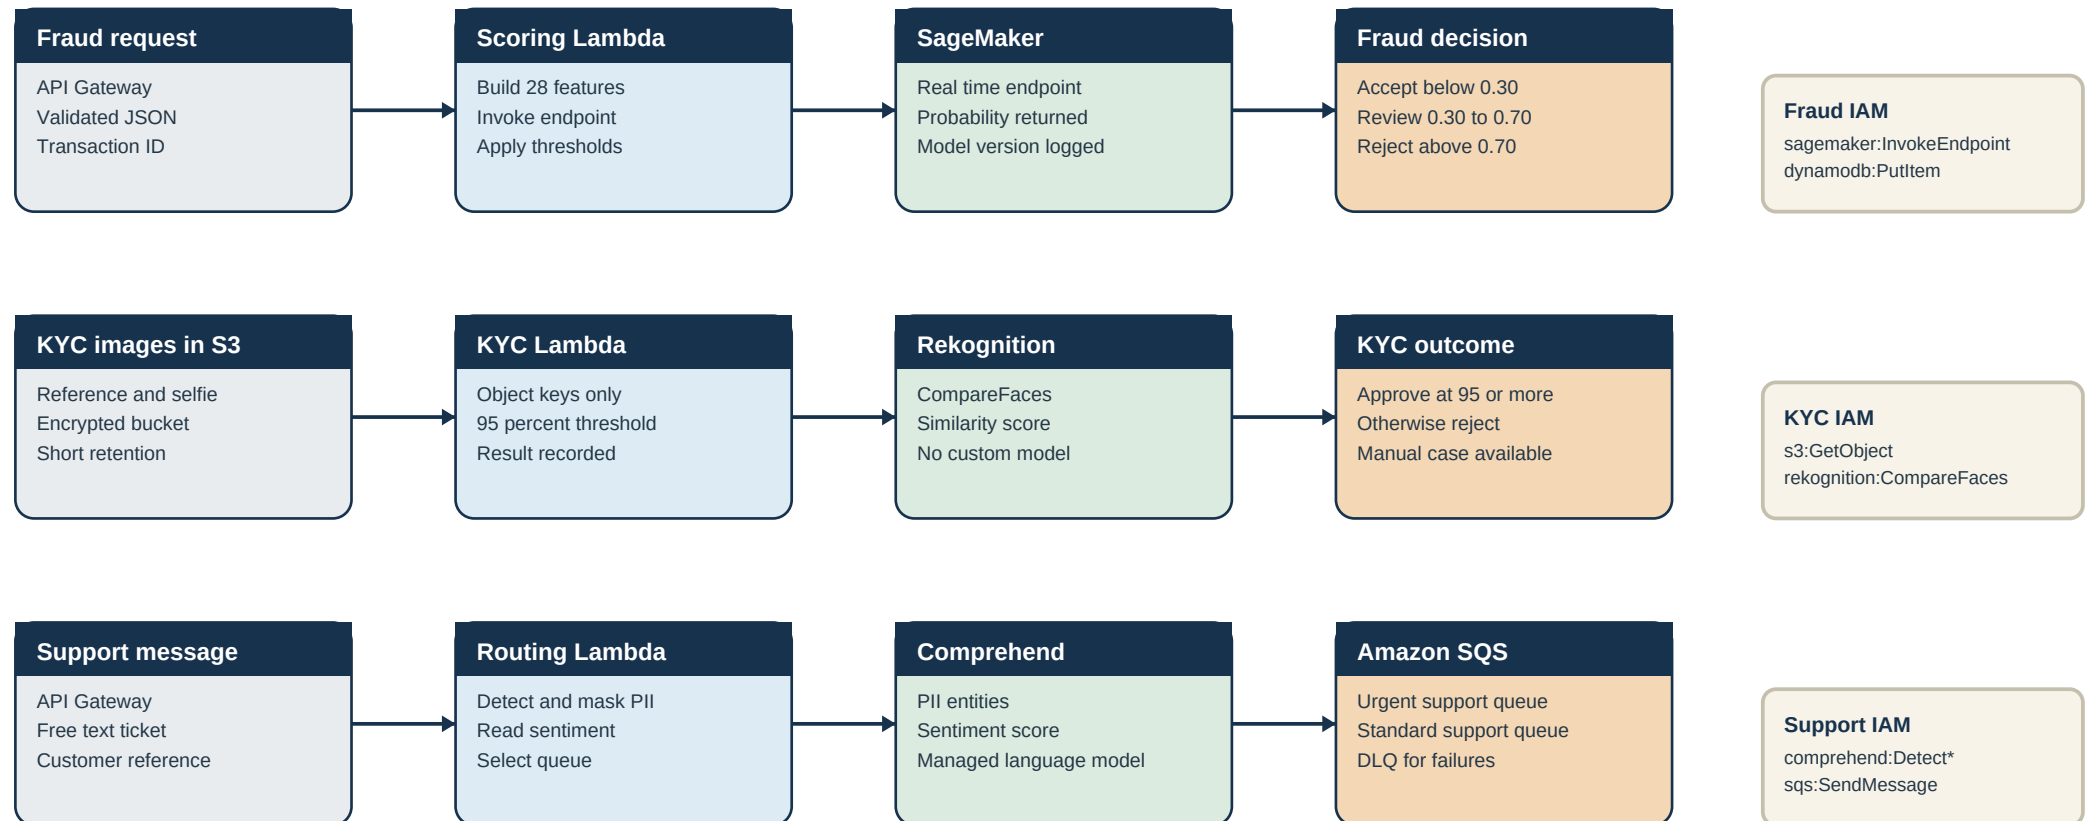

Week 8 | 3 of 5

Customer protection services

Three small workflows address fraud, identity checks and support escalation

Week 8 | 4 of 5

Operating view and evidence map

Controls, ownership and the evidence needed to demonstrate the design

Week 8 | 5 of 5

Security controls

KMS encryption for S3 and results
Least privilege roles per workflow
No secrets stored in source code
CloudTrail records API activity

Data controls

Raw, processed and curated zones
Catalogued schema and partitions
Quarantine for rejected records
Retention follows record purpose

Reliability controls

Retries with bounded backoff
SQS dead letter queue
Kinesis lag alarm
Raw files allow a clean rebuild

Cost controls

Athena scan limit
Parquet and partition pruning
SPICE for repeated dashboard reads
EMR task fleet uses Spot

Who uses each result

Compliance: curated Athena reports
Fraud team: scoring decision and review queue
Security: OpenSearch event dashboards
Managers: QuickSight trend dashboards
Support: masked urgent and standard tickets

Operational signals

Glue job status and rejected row count
Athena bytes scanned and failed queries
Kinesis consumer lag and delivery failures
Endpoint latency and scoring errors
SPICE refresh status and EMR run duration

Portfolio evidence

Architecture PDF and decision notes
Tested Python scripts
Successful AWS console runs
Dashboard and query screenshots
Reflection and self assessment

Recovery sequence

Restore from the raw S3 object, rerun Glue ETL,
refresh partitions, validate Athena totals, refresh SPICE.

Ownership

Data team owns the lake and catalog. Security owns search.
Risk owns decision thresholds. Support owns queue handling.

Evidence boundary

Console screenshots and scores must come from
the learner's actual AWS and LMS activity.
